Learn from **practitioners** what
makes Lean Six Sigma **work**

This half day workshop offers the unique opportunity to gain insight into what makes a successful Lean Six Sigma programme. Find out about the latest thinking on business improvement and exchange ideas with fellow practitioners, academics and consultants on success factors.

The goal of Lean Six Sigma is to successfully identify and complete business improvement projects that save costs, eliminate waste and increase revenue. What sounds easy in theory can turn out to be a challenge in real life.

Our free workshop offers the chance to find out about the latest findings of SigmaPro and Aston University's research into the success factors for Business Improvement. We will cover the basics of business improvement, explain the research carried out and invite you to join in the discussion on how to make your own company improvement programmes successful.

Guest speakers will present their own real life experience on the theory and practice of making Lean Six Sigma work.

Dates & Venues

Fri - 11/06/2010 - **The ICC, Birmingham**

Cost

This workshop is **free of charge!**
